DUETGig

A Student Freelancing and Peer Service Platform

Introduction

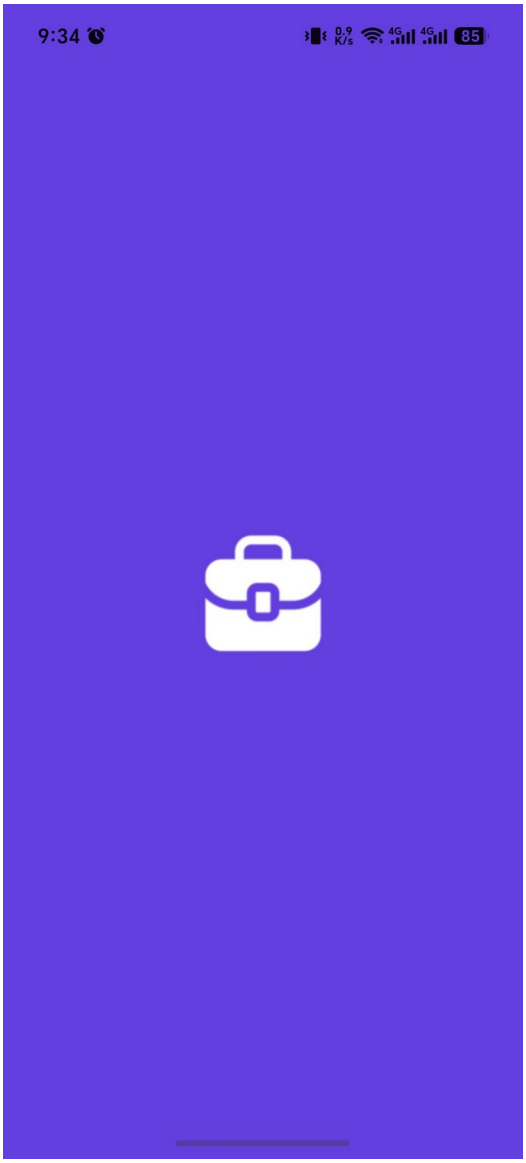

DUETGig is an Android-based mobile platform designed exclusively for the students of Dhaka University of Engineering & Technology (DUET). It bridges the gap between students who possess valuable technical skills (programming, app development, CAD design, robotics, and more) and those who require affordable academic and technical services. The application is developed using Android Studio and Java. Firebase (Authentication, Cloud Firestore, Storage and Cloud Messaging) is used for cloud-based data storage, authentication and real-time notifications. The platform supports the complete journey of a student freelancer: Skill → Experience → Portfolio → Income.

Objective:

- Create an Exclusive Ecosystem for DUET students
- Enable Financial Empowerment through technical and academic skills
- Support Skill & Portfolio Building before graduation
- Encourage Collaboration and knowledge sharing among peers
- Provide a Secure Marketplace for hiring and freelancing
- Enhance University Prestige by showcasing student expertise

---

Splash Screen

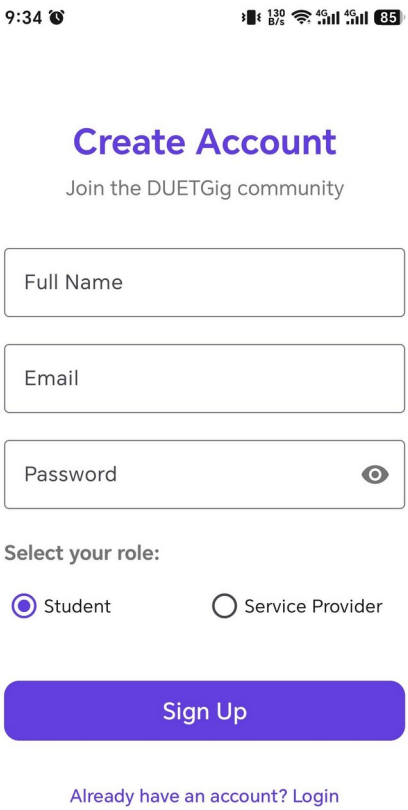

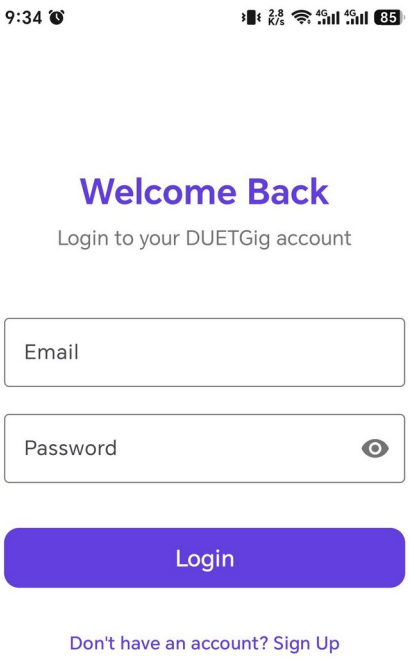

Splash Screen

The application opens with a simple branded splash screen displaying the DUETGig briefcase logo on a solid purple background. It gives the app a professional identity while Firebase initializes the session in the background.

- Branded loading screen
- Automatic session/session-state check
- Smooth transition to Login or Home

Account Creation & Login:

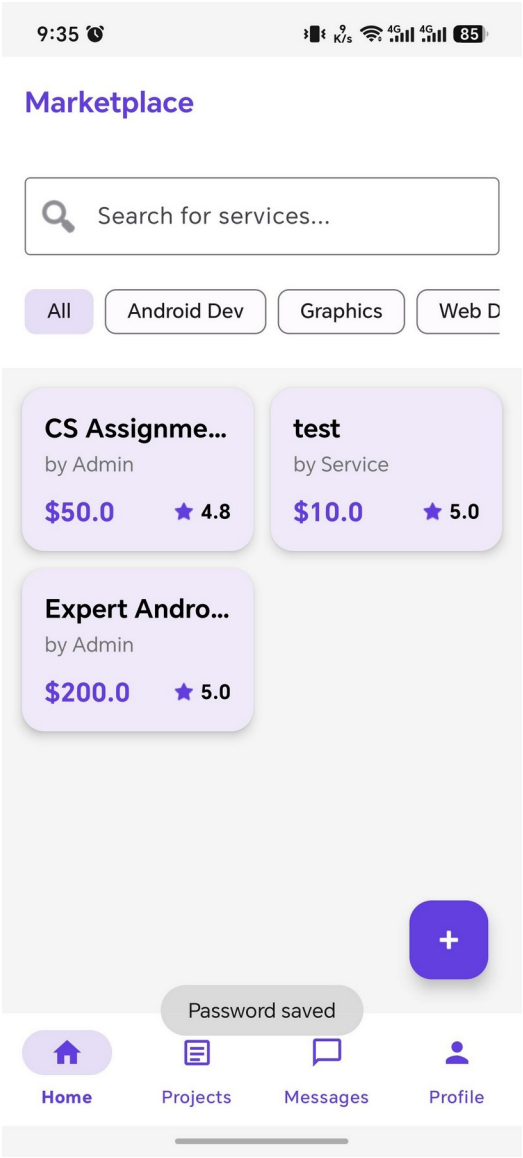

Create Account | **Welcome Back (Login)**

New users can create an account with their full name, email and password, and choose their role — Student or Service Provider. Returning users log in securely with their registered email and password through Firebase Authentication.

- Sign up with name, email and password
- Select role: Student or Service Provider
- Secure login with Firebase Authentication
- Password visibility toggle

Marketplace:

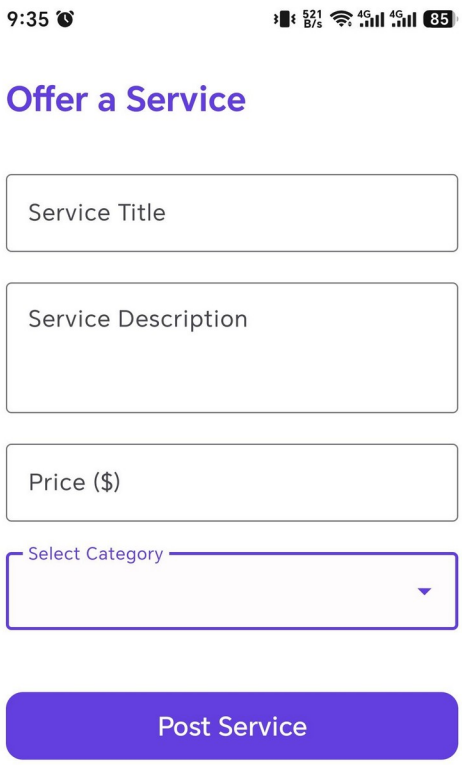

Marketplace / Home

The Home screen shows the Marketplace where all posted services are listed as cards with price and rating. Users can search for services and filter them by category (Android Dev, Graphics, Web Dev, and more).

- Browse all available services
- Search for services by keyword
- Filter by category
- View price and rating at a glance

Offer a Service:

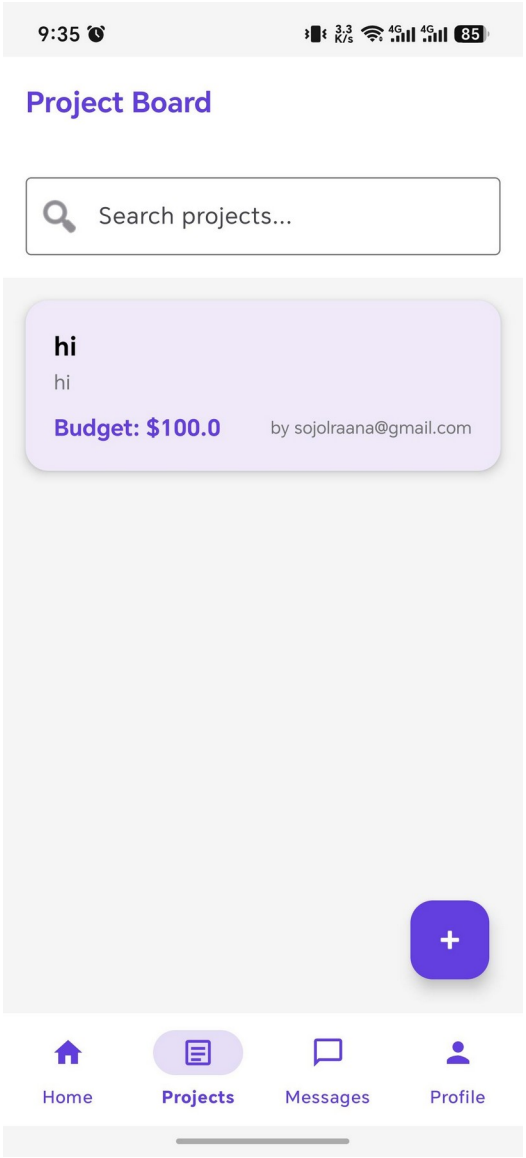

Offer a Service

Service providers can list their own skill-based service by entering a title, description, price and category. Once posted, the service becomes visible to every student in the Marketplace.

- Add service title and description
- Set a price for the service
- Select a category
- Post instantly to the Marketplace

Project Board:

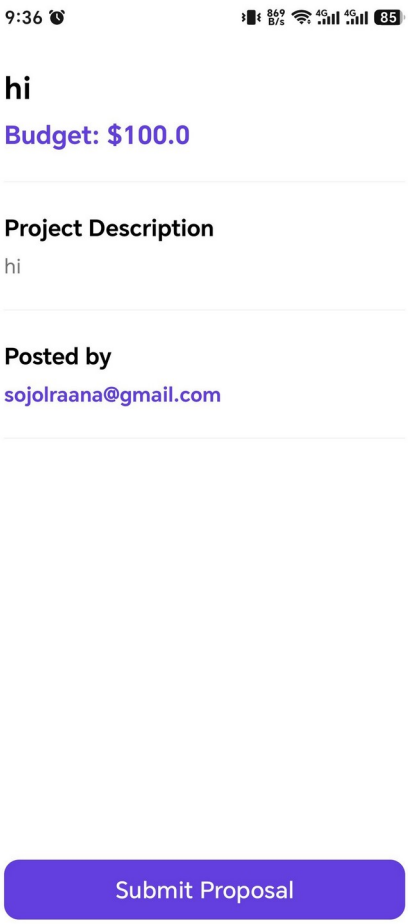

Project Board

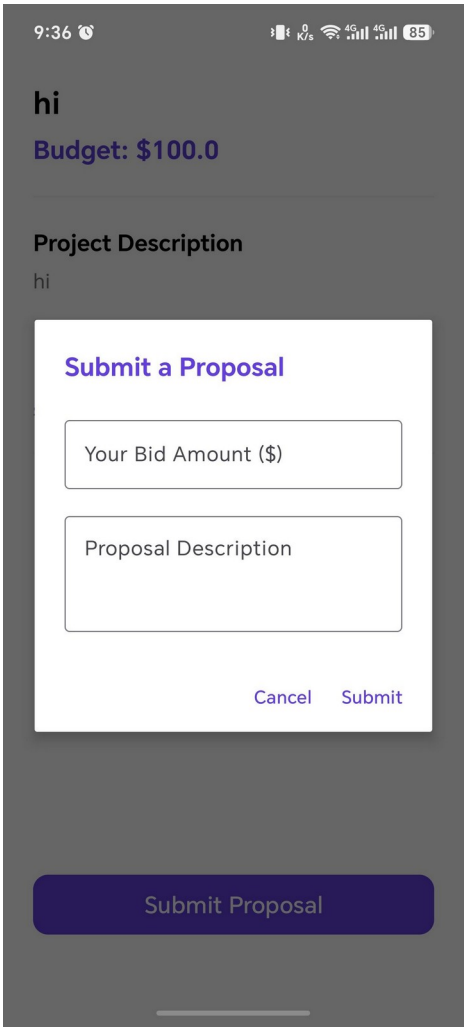

Students who need help can post a custom project with a title, description and budget on the Project Board. Other students can search existing projects and view who posted them before submitting a proposal.

- Post a custom project request
- Search projects by keyword
- View budget and posted-by information
- Quick-add button to create a new project

Project Details & Submit Proposal:

Project Details

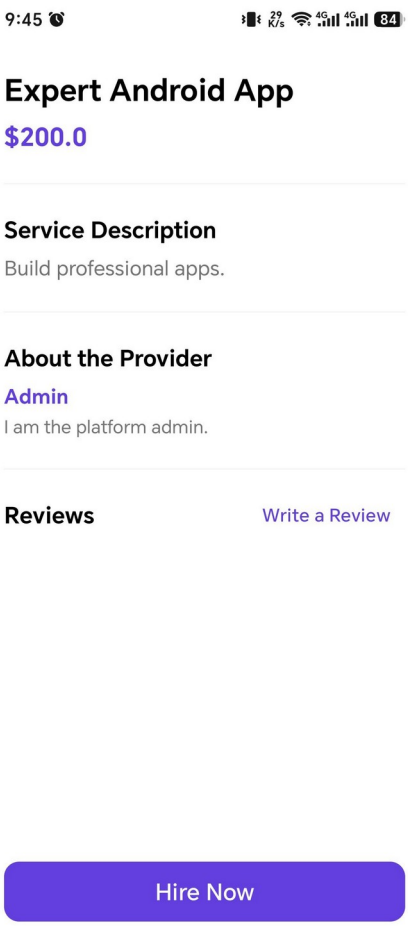

Submit a Proposal

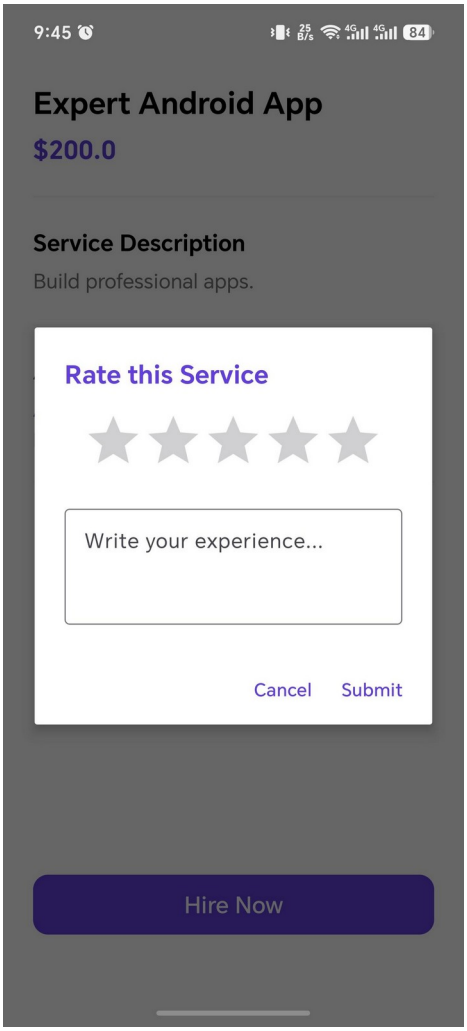

Opening a project shows its full description, budget and the poster's contact email. Interested students tap Submit Proposal to open a form where they enter their bid amount and a short proposal description before sending it to the project owner.

- View full project description and budget
- See who posted the project
- Submit a bid amount
- Write a short proposal description

Service Details, Ratings & Reviews:

Service Details & Reviews

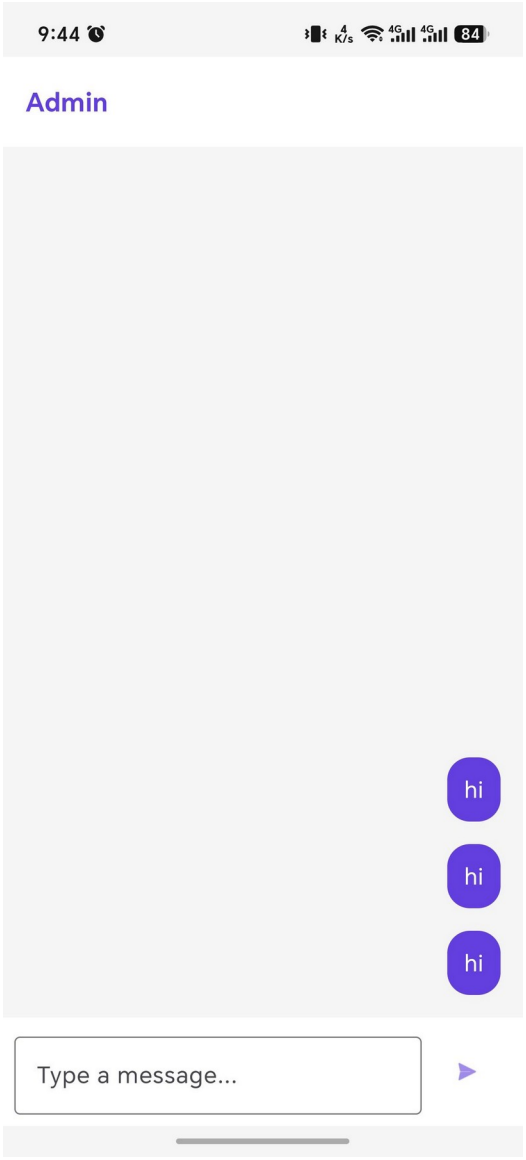

Rate this Service

Each service page shows its description, price, a short bio of the provider, and a Hire Now button. Students who have used a service can leave a star rating and a written review, which helps build trust within the DUET community.

- View service description and provider bio
- Hire the service provider instantly
- Rate a service from 1 to 5 stars
- Write a text review of the experience

Real-Time Chat System:

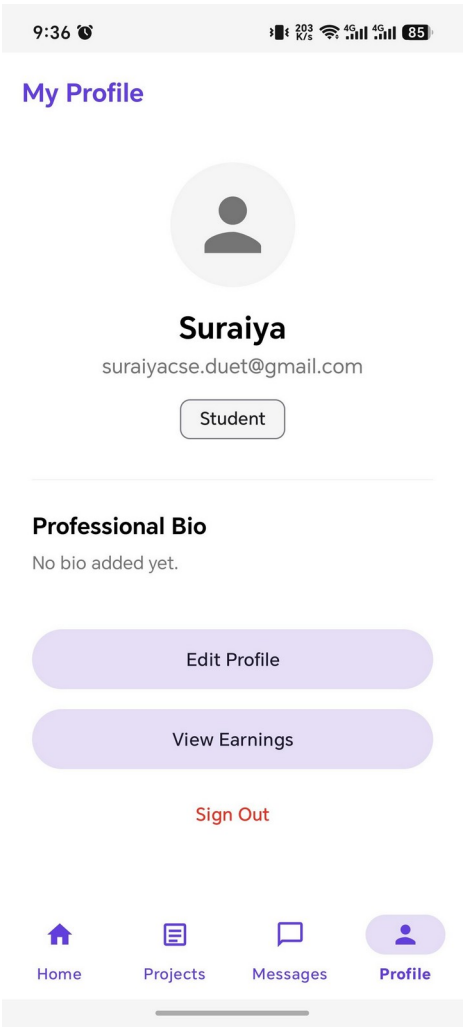

Chat with Provider/Admin

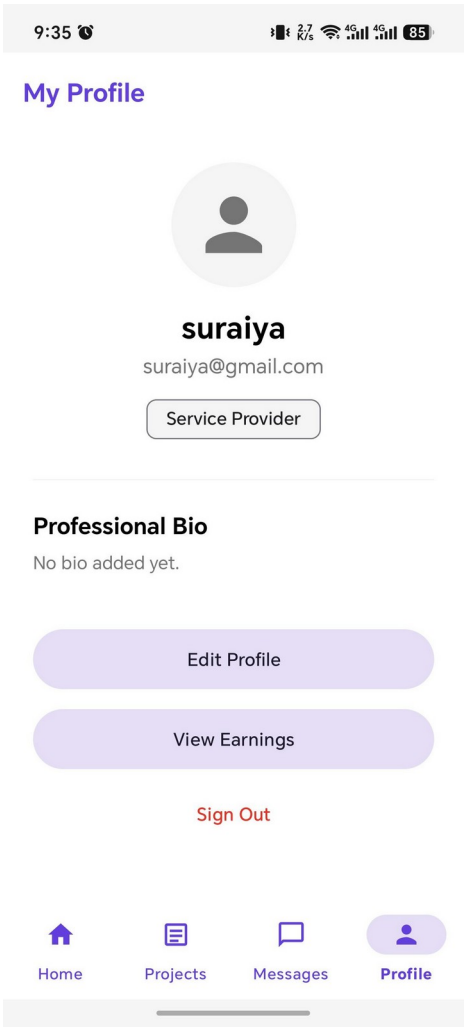

DUETGig includes an integrated real-time chat so clients and freelancers can communicate directly inside the app once a project or service conversation begins, without sharing personal contact details.

- One-to-one real-time messaging
- Message bubbles with timestamps
- Built on Firebase for instant delivery
- Keeps all project communication in one place

Profile Management:

Student Profile

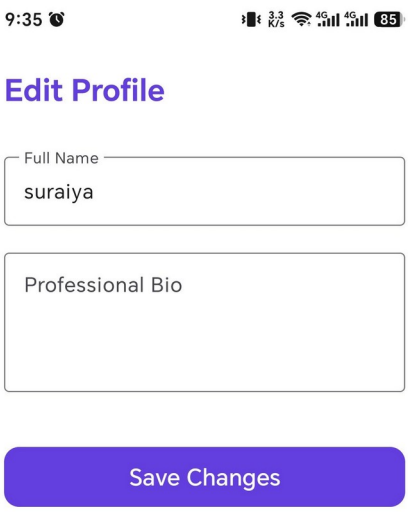

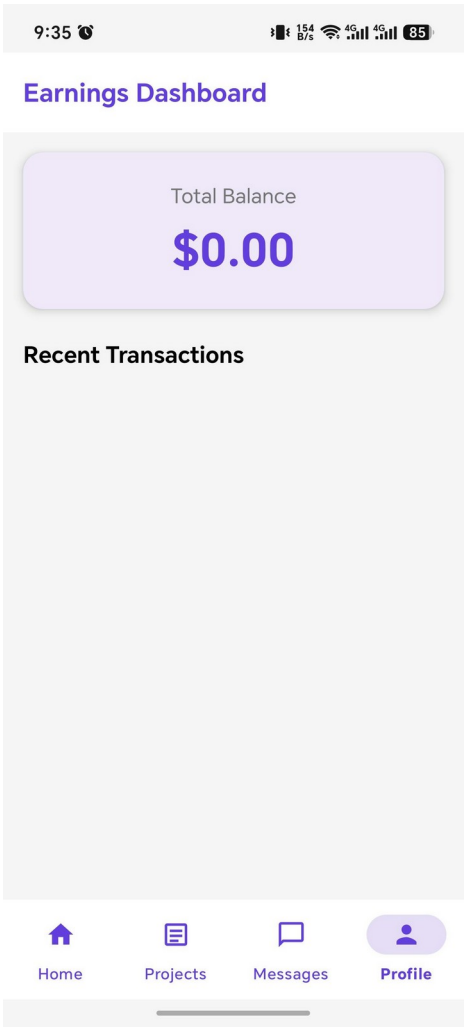

Service Provider Profile

Every user has a profile page showing their name, email and role — Student or Service Provider — along with a professional bio. The profile screen also links to editing details and viewing earnings.

- Display name, email and role badge
- Professional bio section
- Quick links to Edit Profile and Earnings
- Sign out option

Edit Profile & Earnings Dashboard:

Edit Profile **Earnings Dashboard**

Users can update their full name and professional bio from the Edit Profile screen. Service providers can track their income through the Earnings Dashboard, which shows total balance and a list of recent transactions.

- Edit full name and bio
- Save changes instantly to Firestore
- View total balance
- Track recent transactions

Admin Panel:

Admin Profile **Manage Categories**

An Admin role unlocks an extra Admin tab for platform moderation. Admins can add or delete marketplace categories, seed sample data for testing, and view overall app statistics such as total registered users.

- Dedicated Admin tab and role badge
- Add or delete service categories

- Seed sample data for testing
- View app-wide statistics

Future Scope

- Integrated payment gateways
- AI-based skill recommendations & matchmaking
- Internship matching and employer verification
- Alumni mentorship programs
- Multilingual support and web platform integration
- Certificate issuance for completed milestones

Conclusion

DUETGig provides a centralized, secure platform exclusively for DUET students to turn their technical skills into real income and experience. From posting services and projects to real-time chat, ratings, earnings tracking and admin moderation, the app covers the complete freelancing workflow. Built with Java, Android Studio and Firebase, DUETGig demonstrates an effective mobile-based solution for student economic empowerment, ultimately contributing to a stronger, more connected DUET community.
