Introduction

The DUETCS Payment and Panel Management System is an Android-based application designed to simplify student payment and panel management activities. It provides a user-friendly interface for student information, payment, payment status, advisor selection, and panel searching. The application is developed using Android Studio and Kotlin. Firebase Firestore is used for cloud-based database management and data storage. The system organizes student and panel-related information in a structured and accessible way. Overall, it provides a centralized, convenient, and user-friendly platform for DUETCS students.

Objective:

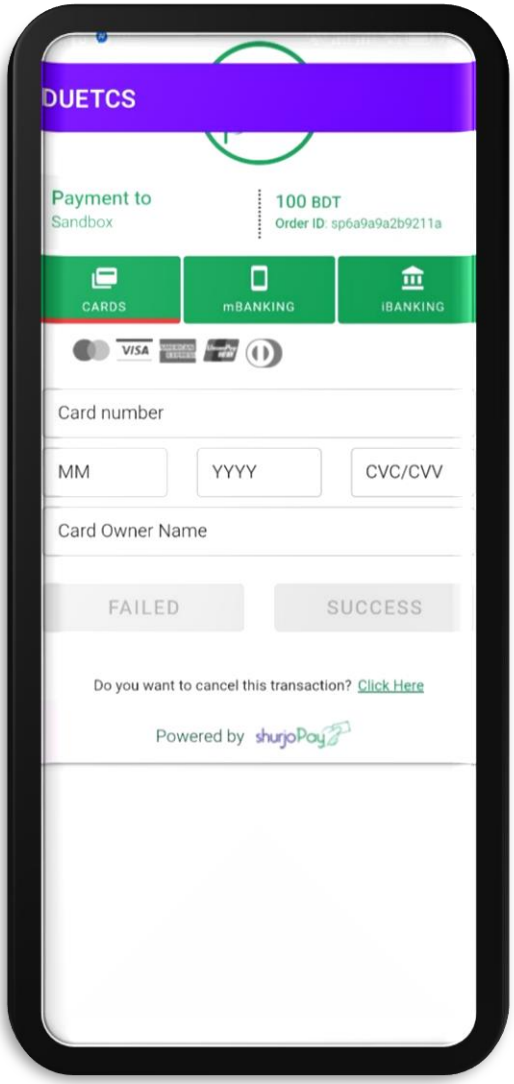

- Digitize Fee Payments
- Reduce Collection Queues
- Save Students' Time
- Eliminate Manual Receipts
- Help Advisers Verify Payments
- Maintain Secure Records
- Support Digital Campus

Student Payment Dashboard :

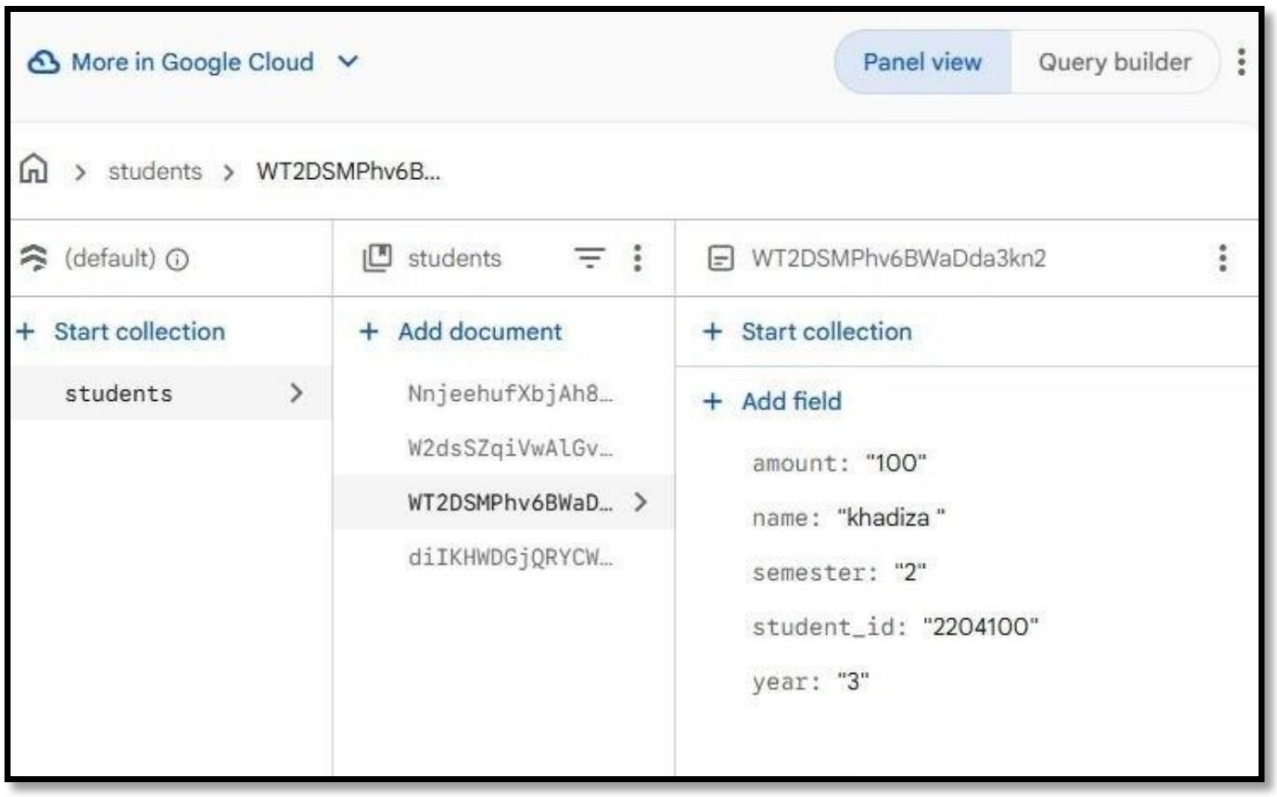

- View payment information
- Manage fee payments
- Check payment status
- Access payment services

Online Payment Gateway :

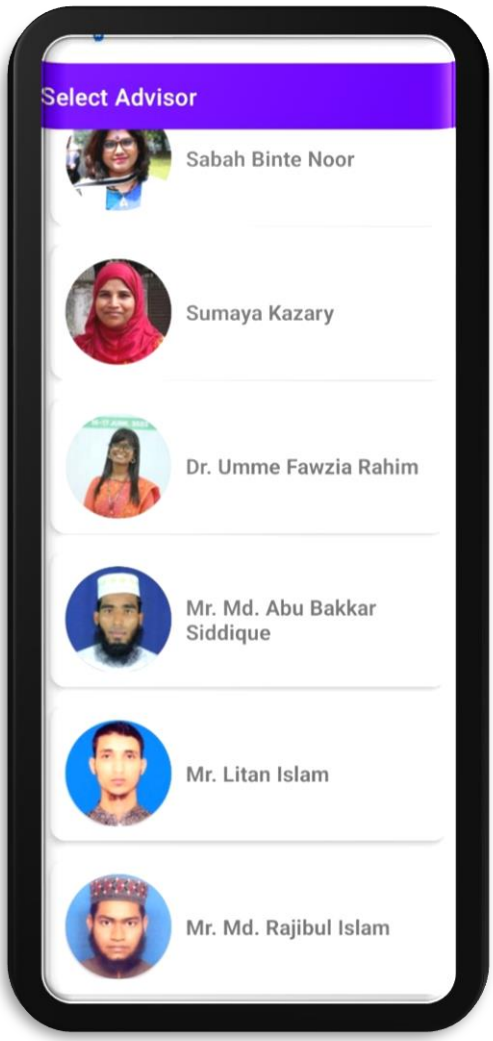

- Select required payment
- Enter payment details
- Complete online transaction
- Receive payment confirmation

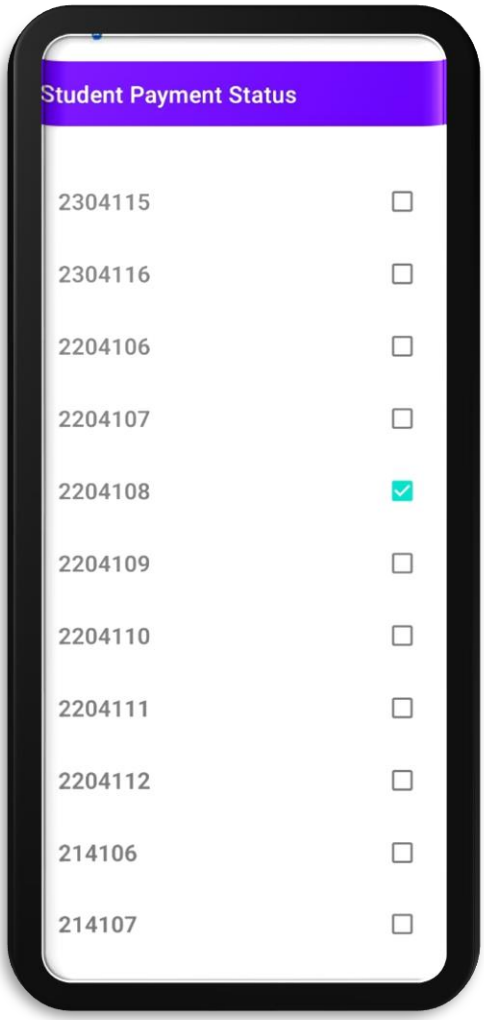

Firestore Database Record :

The Firebase Console shows the students collection and a stored student document. The displayed record contains amount, name, semester, student_id, and year fields. This confirms that the application successfully sends payment-related student information to the Firestore database.

Advisor Selection & Payment Status:

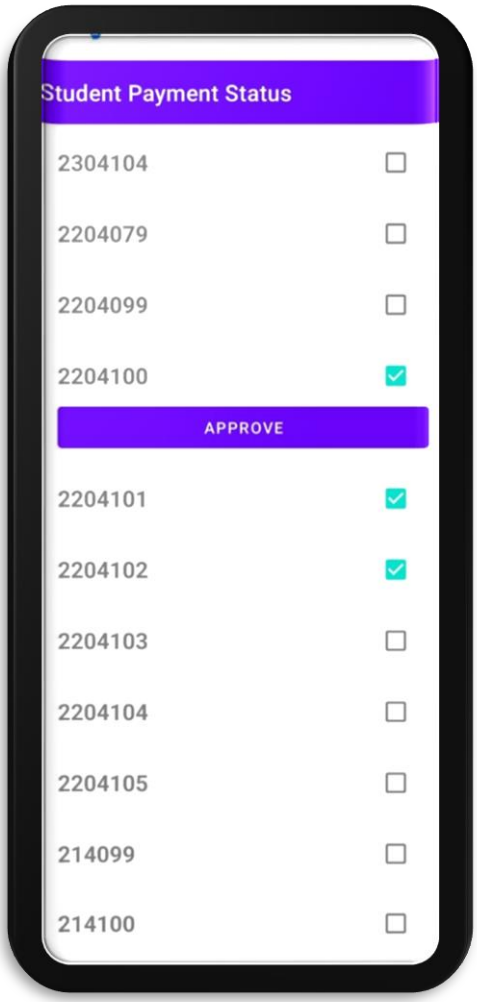

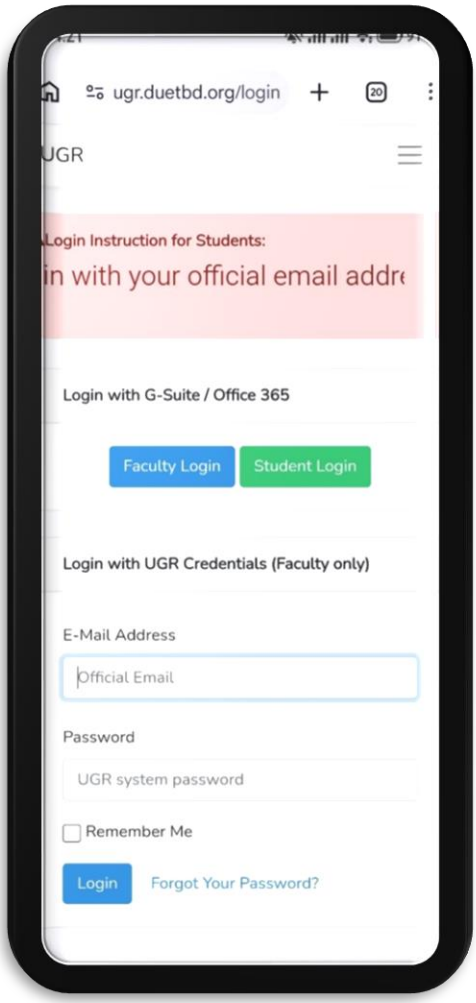

The system allows students to select their preferred adviser through a simple and organized interface. Students can track their payment status easily after completing the payment process. They can also view verification updates to stay informed about the current status of their payment and information. This feature makes the overall process more transparent, convenient, and user-friendly.

- Select preferred adviser
- Track payment status
- View verification updates

Payment Approval & Authentication:

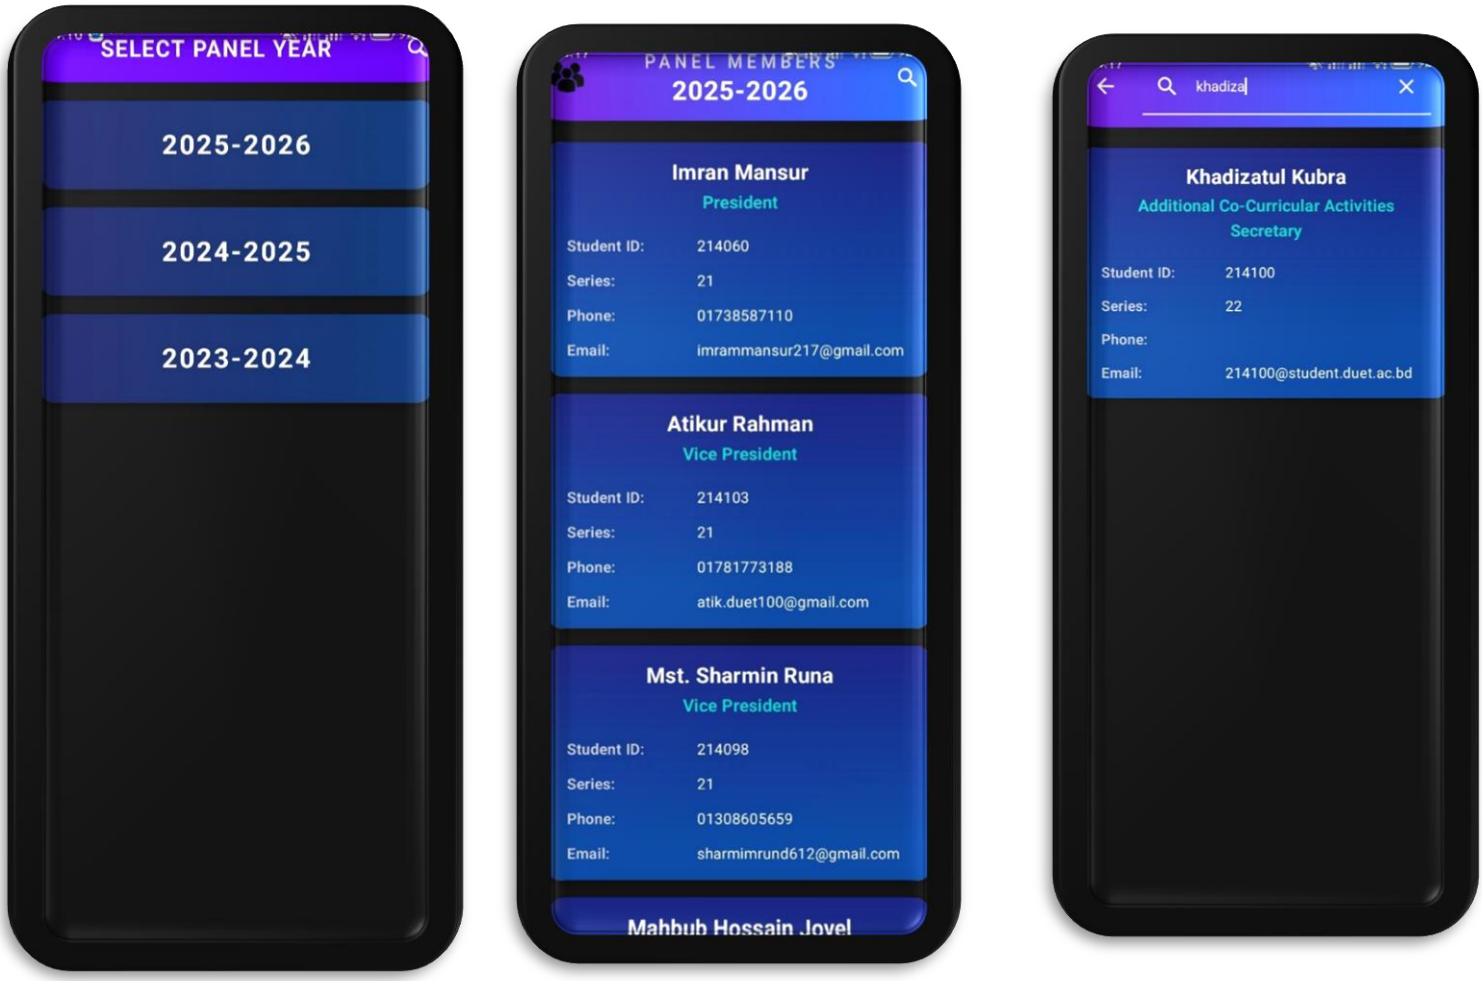

The system provides secure student login to protect payment-related information and access .Authorized users can verify payment information and review submitted payment records. Valid transactions can be approved after proper verification. This feature helps ensure security, accuracy, and proper payment management.

- Secure student login
- Verify payment information
- Review submitted payments
- Approve valid transaction

Computer Society Panel Management :

The system allows students to select a panel year and view the corresponding panel members. Users can search member information and access important details such as name, position, student ID, phone, and email easily.

- Select panel year
- View panel members
- Search member information
- Access member details

Future Work

- Student authentication
- Digital payment receipt
- Payment notifications
- Admin dashboard
- Payment history and reminders

Conclusion

The DUETCS Payment and Panel Management System provides a centralized platform for student payment and panel management. It offers a simple and user-friendly interface for accessing essential services. Students can manage their payment status, adviser selection, and panel information easily. Kotlin, Android Studio, and Firebase Firestore are used to develop and manage the system. The system helps make student-related activities more organized, convenient, and accessible. Overall, the project demonstrates an effective mobile-based solution for DUETCS student services.
